Detailed Action

Allowable Subject Matter

1. Claims 1-24 are allowed.
2. The following is an examiner's statement of reasons for allowance:

With respect to the independent claims 1 and 21-24, prior art fails to disclose or make obvious, in addition to the accompanying features of the claims, a method for performing repeated quantitative analysis using a Fourier transform mass spectrometer (FTMS), comprising a plurality of activities involving: automatically and repeatedly obtaining a sample from a sample source; automatically and repeatedly providing the sample to the FTMS; optimizing at least one variable for the FTMS; acquiring a plurality of outputs from the FTMS; ascertaining an identity of at least one predominant ionic component of the sample based on the plurality of outputs; and determining a quantity of the at least one predominant ionic component.

The dependent claims 2-20 are allowable by virtue of their dependence upon the independent claim 1.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dasseux et al. (6,680,203 B2) disclose the use of a Fourier transform mass spectrometer (FTMS) for the analysis and screening of complex biological samples containing both high and low molecular weight molecules permitting the identification of biologically active molecules. Nakagawa et al. (5,264,697), Z. Liang (5,248,882), and Goodman et al. (4,945,234), disclose an FTMS for the analysis of a particular component of a sample that is being analyzed.
